

I. Storm Water Services Priority Categories

1. First Priority (Category A):

- Living space flooding or flooding of nonresidential structures that have electricity and permanent foundations
- Street flooding
- Ditch/Channel or Blowouts – within approximately 10 feet of a house or roadway, blowouts next to road's edge, street failures, catch basins in street right of way, failures of drainage structures
- Public safety hazards – Storm drain failures at footbridges, missing grates or manhole covers
- Street storm drain failures at sidewalks and driveways
- Total blockages of storm drain outfall or buried outlets that are causing or could cause a qualifying problem

2. Second Priority (Category B):

- Blowouts – Away from any permanent structure outside of the right of way (approximately 10 feet from house or roadway), collapsed headwall or imminent danger of failures of drop inlets and junction boxes
- Crawlspace flooding

3. Third Priority (Category C):

- Sedimentation – Sediment built-up at outlets of storm drainage pipes causing partial blockage of the channel
- Headwall Damage – Minor structural cracks or leaning wall
- Channel Blockage – Excessive natural debris obstructing water flow or urban trash that is causing or could cause a qualifying problem
- Channel Erosion – Banks unprotected (showing active erosion) and unstable

The Town has:

- 5 First Priority Projects
- 8 Second Priority Projects
- 36 Third Priority Projects
